

Sub A
(Amended) A multi-chamber tube for packaging and component-wise dispensing of packaged substances, including a deformable tube body portion of plastic sheet having first and second ends,

a tube head at the first end of the body portion and having a closable nozzle,

AT
a closure at the second end of the body portion and closing the opening of the tube thereat, and

at least one partition of material in sheet form and which starting from the closure passes through the interior of the body portion, the head and the nozzle, the sheet of the partition being of greater stiffness than that of the body portion, wherein the sheet partition defines with the nozzle a pair of unobstructed nozzle passages.

Sub A
9. (Amended) A multi-chamber tube for packaging and dispensing a plurality of substances including

a tube body portion of deformable plastic sheet and having first and second ends,

AB
a tube head at the first end and having a nozzle,

a closure crimp at the second end and closing the opening of the tube thereat, and

at least one partition of material in sheet form and which starting from the closure crimp extends through the

interior of the tube body portion, the head and the nozzle
by means of partition parts which are dimensionally adapted
to the tube body portion, the head and the nozzle, wherein
the sheet of the partition is of greater stiffness than
that of the tube body portion, wherein the sheet partition
defines with the nozzle a pair of unobstructed nozzle
passages.
